ZAFER ALİ GUNBEY

• Back End Developer •

ABOUT

Hello, I am Zafer Ali. Throughout my career, I have always valued learning, striving to improve myself by researching topics I am unfamiliar with. Despite having written code for many years, I only began working professionally after completing my education. During my student years, I worked to develop myself by freelancing and undertaking internships while also keeping abreast of the industry. In all the jobs I've taken up to now, I have approached problems with a solution-focused mindset, and this approach has led me to success in many critical issues. In short, as a person who is inclined towards teamwork, solution-oriented, loves to learn and research, and enjoys coding, I continue to strive towards achieving my career goals.

EDUCATION

2014/2018 - Gölcük High School
- Web Design

2018/2020 -Uludağ University
- Computer Programming

EXPERİENCE

· **Sept 2024**
· **Current**
· **11 Month**

MTU Travel
Full Stack Developer
• Hangi Uçak: I contributed to a flight ticket purchasing system project, where I worked on both frontend and backend features. On the frontend, I implemented responsive UI components using **HTML**, **CSS**, and **Bootstrap**. On the backend, I developed features using **.NET Core** within a **DDD architecture** and **MediatR**, focusing on maintainability and clean code practices. I optimized existing modules for better performance and took an active role in feature development, issue resolution, and debugging processes.

Laksi
Backend Developer
• Laksi Project: I worked as a **backend developer** for a mobile application providing taxi rental services. In this project, built on a **.NET Core** infrastructure with a **DDD** and **MediatR** architecture, I refactored the codebase to enhance performance. Utilizing **ElasticSearch** and **GeoJSON**, I identified and filled missing data in external map APIs, ensuring more accurate results and reducing **API** usage. Additionally, I contributed to the project's stability by actively participating in existing bug fix processes.

Thea Tech
Backend Developer
• Pazareo project: In this project, which is a second-hand buying and selling system, I am involved in various tasks such as rewriting the backend from scratch with **.NET Core** 7 and **NodeJS**. For the backend architecture, I utilized a **Modular Monolith** approach to ensure maintainability and scalability. Additionally, for **CI/CD** processes, I implemented **Docker, ElasticBeanstalk, AWS CodeBuild**, and **GitHub Actions** to streamline the deployment pipeline. This also includes selecting the appropriate database architecture for each module in the database section. I am also responsible for enhancing code quality through internal code reviews and managing the team.

· Sept 2021 · Dec 2022 · 1 Year 4 Month	**Avukatjet Bilişim** Full Stack Developer • Kobis: For the Kocaeli Municipality's bicycle rental system, I worked on the project's admin panel, website, and additionally, both the panel and backend structure of the stock tracking project. Technologies I use; **ReactJS**, **.Net Core 6**, **jQuery**, **Css**, **PostgreSQL**, **Ef Core** •Twety Scooter: I worked on the admin panel for the scooter rental system project. •E-commerce Systems: I performed bug fixes for e-commerce sites that provide services to external clients. •E-Invoice Generator: I made developments on a web project that creates an e-invoice template based on the information entered according to the customer's requirements.

CERTİFİCATES

Java Mobile Development Certification
Institution: Public Education Center (Erasmus)
2018

English A1 Training Certification
Institution: Public Education Center (Erasmus)
2018

Ardunio Development Certification
Institution: Public Education Center (Erasmus)
2018

Pyhton Development Certification
Institution: ISKUR - Vocational Training Courses
2019
